

# VIBE Optisound Gaming

## What is Optisound

Optisound Gaming is a powerful subwoofer that combines with your existing TV speakers to enhance your viewing experience for movies, sports, games and TV programmes. Just one single unit! Amplifier built in and no ugly speakers or wiring on show.

The new way to upgrade your games console to a surround sound system without the hassle or expense of 5.1.

As bass is not directional it appears that there is sound being produced in areas of the room other than just the TV, creating an immersive surround sound experience.

## Installation

The VIBE Optisound has been designed to deliver great sound from almost any location. Placing the TV and Optisound in the corner of the room will further increase the sound produced. Plug & Play straight out of the box. Optisound is easy to install in under two minutes using the supplied cable.

# The Optisound Range

## Optisound Game 5

Analogue RCA inputs allow direct connection to a single device such as a Blu-ray player, satellite or games console, additionally if the TV has an analogue RCA output it can connect directly to this so all devices connected to the TV can be output through the subwoofer.

**Model :** Optisound Game5 – V1

**Width :** 270 mm (10.6")

**Depth :** 156 mm (6.1")

**Height :** 189 mm (7.4")
